YEARS OF TEAM EXPERIENCE

Your product will eventually be used by a human. The question is whether you know the effects it will have, before that happens. CompreVie gives you that answer from lab-made living human skin, with nothing artificial in between: from a simple cell to a full thickness skin organ to test your long-term formulation performance on.

## THE PROBLEM OF CONVENTIONAL TESTING:

### RECONSTRUCTED SKIN/SPHEROIDS/EX VIVO

Ex vivo donor skin is real, but it's already stressed when removed and dead within a week, making chronic effects invisible. Reconstructed models last longer but are built on synthetic scaffolds and hydrogel matrices, altering how your compound behaves towards human biology.

**Manipulated biology.**

### ANIMAL MODELS

Animals have different pH, barrier mechanics, and immune responses. Every result requires cross-species extrapolation, which is often not 1:1 applicable for human predictions.

**Animal data isn't human data.**

### COMPREVIE: YOUR TESTING PARTNER

Our models range from 2D to 3D. They're age & sex matched, built with no gels or scaffolds, and alive for up to 180 days.

We give you longitudinal data on skin that actually represents your consumer.

**Human-relevant data.**

## WHAT A PILOT OFFERS:

### • Claim-relevant data at 50% discounted price

The most human-relevant in vitro readouts, at a unique price compared to the state of the art. Scientific interpretation instead of raw data.

### • Your scientific partner, not just your testing lab

End-to-end support for your testing project, from timeline, method selection, execution, and results delivery. Tailoring the service to meet your needs.

### • Age and sex matching of your target consumer

Most testing platforms give you average skin. We don't. Select the donor profile that matches the biology of your customers, from cells to organs.

### • Science-backed, cruelty-free formulations

In a market full of claims and no data behind them, human skin science is your competitive edge.

“Unique expertise in skin-on-chip technology. CompreVie is accelerating that future.”
